Research Laboratory Technician positions in Immuno-Oncology

Occupation: Full-time  
Period: open contract  
Place: Brussels  

The de Duve Institute, located at the Université catholique de Louvain in Brussels, is hiring two full time research laboratory technicians to work in the laboratory of Prof. Benoit Van den Eynde, director of the Ludwig Institute for Cancer Research, Brussels Branch.

Our group has pioneered the field of cancer immunotherapy by providing the molecular definition of human tumor antigens. Cancer immunotherapy is showing unprecedented success in a number of metastatic cancer types, with a significant fraction of patients showing durable tumor regressions associated with long-term survival. However, a majority of patients fail to respond efficiently. Our current work aims at characterizing the mechanisms of resistance to immunotherapy.

We are looking for two skilled and motivated laboratory technicians, interested in working in the field of cancer immunotherapy.

Field of activity and techniques:
